# Kurukshetra University, Kurukshetra (Established by the State Legislature Act XII of 1956) ('A++' Grade, NAAC Accredited)

| योगस्थः कुरु कर्माणि || समबुद्धि व योग युक्त होकर कर्म करो (Perform Actions while Stead fasting in the State of Yoga)

Syllabus of Examination (1<sup>st</sup> Semester to 4<sup>th</sup> Semester) for Under-Graduate Programmes

# Bachelor of Computer Applications (Cloud Technology & Information Security) BCA (CTIS)

according to

Curriculum Framework for Under-Graduate Programmes
As per NEP-2020 (Multiple Entry-Exit, Internships and Choice Based Credit
System)

# DEPARTMENT OF COMPUTER SCIENCE & APPLICATIONS

(For the Batches Admitted From 2023-2024)

Scheme: 2023-24, Syllabus: 2023-24				
Part A - Introduction				
Subject	BCA (Cloud Techn	BCA (Cloud Technology and Information Security)		
Semester	Ι			
Name of the Course	Problem Solving th	rough C		
Course Code	B23-CTS-101			
Course Type: (CC/MCC/MDC/CC- M/DSEC/VOC/DSE/PC/AEC/ VAC)	CC-A1			
Level of the course (As per Annexure-I	100-199			
Pre-requisite for the course (if any)	None			
Course Learning Outcomes(CLO):	<ul> <li>After completing this course, the learner will be able to: <ol> <li>learn the basics of C program, data types, and input/output statements.</li> <li>understand different types of operators, their hierarchies, and also control statements of C.</li> <li>implement programs using arrays and strings.</li> <li>get familiar with advanced concepts like structures, unions, etc. in C language.</li> </ol> </li> </ul>			
	5*. to implement concepts of	the programs based C.	on various	
Credits	Theory	Practical	Total	
	3	1	4	
Contact Hours	3	2	5	
Max. Marks:100(70(T)+30(P)) Internal Assessment Marks:30(2 End Term Exam Marks: 70(50(T)		Time: 3 Hrs.(T),	3Hrs.(P)	

## **Part B- Contents of the Course**

# **Instructions for Paper-Setter**

The examiner will set a total of nine questions. Out of which the first question will be compulsory. The remaining eight questions will be set from four units, selecting two questions from each. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will

be compulsory.

Unit	Topics	Contact Hours
Ι	Overview of C: History, Importance, Structure of C Program, Character Set, Constants and Variables, Identifiers and Keywords, Data Types, Assignment Statement, Symbolic Constant. Input/output: Formatted I/O Function-, Input Functions viz. scanf(), getch(), getche(), getchar(), gets(), output functions viz. printf(), putch(), putchar(), puts().	11
II	Operators & Expression: Arithmetic, Relational, Logical, Bitwise, Unary, Assignment, Conditional Operators and Special Operators Operator Hierarchy; Arithmetic Expressions, Evaluation of Arithmetic Expression, Type Casting and Conversion. Decision making with if statement, ifelse statement, nested if statement, else-if ladder, switch and break statement, goto statement, Looping Statements: for, while, and dowhile loop, jumps in loops.	11
III	Arrays: One-dimensional arrays - Declaration, Initialization, and Memory representation; Two-Dimensional arrays -Declaration, Initialization, and Memory representation. Functions: definition, prototype, function call, passing arguments to a function: call by value; call by reference, recursive functions. Strings: Declaration and Initialization, String I/O, Array of Strings, String Manipulation Functions: String Length, Copy, Compare, Concatenate, etc., Search for a Substring.	12
IV	Pointers in C: Declaring and initializing pointers, accessing address and value of variables using pointers; Pointers, and Arrays.  User-defined data types: Structures - Definition, Advantages of Structure, declaring structure variables, accessing structure members, Structure members initialization, Array of Structures; Unions - Union definition; difference between Structure and Union.	11
V*	Practicum: Students are advised to do laboratory/practical practice not limited to, but including the following types of problems:  • To read the radius of a circle and to find the area and circumference  • To read three numbers and find the biggest of three  • To check whether the number is prime or not  • To read a number, find the sum of the digits, reverse the number, and check it for palindrome  • To read numbers from the keyboard continuously till the user presses 999 and to find the sum of only positive numbers  • To read the percentage of marks and to display appropriate message (Demonstration of else-if ladder)	30

- To find the roots of the quadratic equation
- To read marks scored by n students and find the average of marks (Demonstration of single dimensional array)
- To remove Duplicate Elements in a single dimensional Array
- To perform addition and subtraction of Matrices
- To find the factorial of a number
- To generate Fibonacci series
- To find the length of a string without using the built-in function
- To demonstrate string functions
- To read, display, and add two m x n matrices using functions
- To read a string and to find the number of alphabets, digits, vowels, consonants, spaces, and special characters
- To Swap Two Numbers using Pointers
- To demonstrate student structure to read & display records of n students
- To demonstrate the difference between structure & union.

# **Suggested Evaluation Methods**

#### **Internal Assessment:**

#### > Theory

• Class Participation: 5

• Seminar/presentation/assignment/quiz/class test etc.: 5

• Mid-Term Exam: 10

#### > Practicum

• Class Participation: NA

• Seminar/Demonstration/Viva-voce/Lab records etc.: 10

• Mid-Term Exam: NA

# End Term Examination:

A three hour exam for both theory and practicum.

Examiner will set a total of nine questions. Out of which first question will be compulsory. Remaining eight questions will be set from four unit selecting two questions from each unit. Examination will be of three-hour duration. All questions will carry equal marks. First question will comprise of short answer type questions covering entire syllabus.

Candidate will have to attempt five questions in all, selecting one question from each unit. First question will be compulsory.

Unit	Topics	Contact Hours
I	Computer Fundamentals: Evolution of Computers through generations, Characteristics of Computers, Strengths, and Limitations of Computers, Classification of Computers, Functional Components of a Computer System, Applications of Computers in Various Fields. Types of Software: System software, Application software, Utility Software, Shareware, Freeware, Firmware, Free Software. Memory Systems: Concept of bit, byte, word, nibble, storage locations, and addresses, measuring units of storage capacity, access time, the concept of the memory hierarchy. Primary Memory - RAM, ROM, PROM, EPROM. Secondary Memory - Types of storage devices, Magnetic Tape, Hard Disk, Optical Disk, Flash Memory.	11
II	I/O Devices: I/O Ports of a Desktop Computer, Device Controller, Device Driver. Input Devices: classification and use, keyboard, pointing devices - mouse, touchpad and trackball, joystick, magnetic stripes, scanner, digital camera, and microphone Output Devices: speaker, monitor, printers: classification, laser, inkjet, dot-matrix. Plotter.  Introduction to Operating System: Definition, Functions, Features of Operating System, Icon, Folder, File, Start Button, Task Bar, Status Buttons, Folders, Shortcuts, Recycle Bin, Desktop, My Computer, My Documents, Windows Explorer, Control Panel.	12
III	The Internet: Introduction to networks and Internet, history, Internet, Intranet & Extranet, Working of Internet, Modes of Connecting to Internet.  Electronic Mail: Introduction, advantages and disadvantages, User Ids, Passwords, e-mail addresses, message components, message composition, mailer features. Browsers and search engines.	11
IV	Threats: Physical & non-physical threats, Virus, Worm, Trojan, Spyware, Keylogers, Rootkits, Adware, Cookies, Phishing, Hacking, Cracking.  Computer Security Fundamentals: Confidentiality, Integrity, Authentication, Non-Repudiation, Security Mechanisms, Security Awareness, Security Policy, anti-virus software & Firewalls, backup & recovery.	11
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems: Operating System:  • Starting with the basics of Operating Systems and its functionalities Computer Basics: • Identify the various computer hardware • Understanding the working of the computer	30

• Understanding various types of software

# Internet and E-mail:

- Using the Internet for various tasks
- Creating and using e-mail.

# Security:

- Understanding various threats
- How to be safe from virus threats
- Various software to get safe from virus attacks.

# **Suggested Evaluation Methods**

marks. The first question will comprise short answer-type questions covering the entire syllabus. The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Number Systems: Binary, Octal, Hexadecimal, etc. Conversions from one number system to another, BCD Number System. BCD Codes: Natural Binary Code, Weighted Code, Self-Complimenting Code, Cyclic Code.  Error Detecting and Correcting Codes. Character representations: ASCII, EBCDIC, and Unicode.  Number Representations: Integer numbers - sign-magnitude, 1's & 2's complement representation. Real Numbers normalized floating point representations.	11
II	Binary Arithmetic: Binary Addition, Binary Subtraction, Binary Multiplication, Binary Division using 1's and 2's Compliment representations, Addition and subtraction with BCD representations. Boolean Algebra: Boolean Algebra Postulates, basic Boolean Theorems, Boolean Expressions, Boolean Functions, Truth Tables, Canonical Representation of Boolean Expressions: SOP and POS, Simplification of Boolean Expressions using Boolean Postulates & Samp; Theorems, Kaurnaugh-Maps (up to four variables), Handling Don't Care conditions.	11
III	Logic Gates: Basic Logic Gates – AND, OR, NOT, Universal Gates – NAND, NOR, Other Gates – XOR, XNOR, etc. Their symbols, truth tables, and Boolean expressions.  Combinational Circuits: Design Procedures, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Multiplexers, Demultiplexers, Decoder, Encoder, Comparators, Code Converters.	11
IV	Sequential Circuits: Basic Flip-Flops and their working. Synchronous and Asynchronous Flip-Flops, Triggering of Flip-Flops, Clocked RS, D Type, JK, T type, and Master-Slave Flip-Flops. State Table, State Diagram, and State Equations. Flip-flops characteristics & Excitation Tables. Sequential Circuits: Designing registers –Serial-In Serial-Out (SISO), Serial-In Parallel-Out (SIPO), Parallel-In Serial-Out (PISO) Parallel-In Parallel-Out (PIPO) and shift registers.	12
V*	Practicum: Students are advised to do laboratory/practical practice not limited to, but including the following types of problems: Number System:  • Problems based on the Number System and their conversion.  • Programs based on Number System conversion. Binary Arithmetic	30

- Problems based on Binary Arithmetic.
- Programs based on Binary Arithmetic.
- Problems based on Boolean Expression and their simplification

# Logic Gates

• Understanding the working of logic Gates.

## Combinatorial Circuits:

• Designing and understanding various combinational circuits.

# Sequential Circuits:

• Designing and understanding various sequential circuits.

The examiner will set a total of nine questions. Out of which, the first question will be compulsory. The remaining eight questions will be set from four units selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus. The candidate will have to attempt five questions, selecting one from each unit. First

question will be compulsory.

The practicum will be evaluated by an external and an internal examiner. The examination will be of three-hour duration.

Topics	Contact Hours
Input Output in C++: Unformatted and Formatted I/O Operations. I/O using insertion and extraction operators and streams in C++. Functions: Declaration and Definition, return values, arguments, passing parameters by value, call by reference, call by pointer, Recursion, Inline Functions, Function overloading. Pointers, structures, and union in C++.	11
Object-oriented features of C++: Class and Objects, Data hiding and encapsulation, abstraction, Data Members and Member Functions, accessing class members, empty class, local class, global class, Scope Resolution Operator and its Uses, Static Data Members, Static Member Functions, Structure vs Class, Friend function and friend class.  Constructors and Destructors: Constructors, Instantiation of objects, Default constructor, Parameterized constructor, Copy constructor and its use Destructors. Dynamic initialization of objects.	12
Operator Overloading: Overloading unary and binary operators: arithmetic operators, manipulation of strings using operators.  Inheritance: Derived class, base class, Accessing the base class member, Inheritance: multilevel, multiple, hierarchical, hybrid; Virtual base class, Abstract class.	11
Virtual Functions, pure virtual functions; Polymorphism and its types <b>Exception Handling in C++</b> : exception handling model, exception handling constructs - try, throw, catch, Order of catch blocks, Catching all exceptions, Nested try blocks, handling uncaught exceptions.	11
Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  • Write a C++ program to print the following lines:  • Your introduction  • Your institute introduction  • Write a program that accepts principle, rate, and time from the user and prints the simple interest.  • Write a program to swap the values of two variables.  • Write a program to check whether the given number is even or odd (using ?: ternary operator).  • Write a program to check whether the given number is positive or negative (using?: ternary operator).  • Write a program that inputs three numbers and displays the largest number using the ternary operator.  • WAP to initialize data members of the class using the constructor.	30

The examiner will set a total of nine questions. Out of which the first question will be compulsory. The remaining eight questions will be set from four units selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus. The candidate must attempt five questions in all, selecting one question from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours	
I	Introduction to the Internet and World Wide Web (WWW); Evolution and History of World Wide Web, Web Pages and Contents, Web Clients, Web Servers, Web Browsers; Hypertext Transfer Protocol, URLs; Searching, Search Engines and Search Tools.  Web Publishing: Hosting website; Internet Service Provider; Planning and designing website; Web Graphics Design, Steps For Developing website	11	
II	Creating a Website and Introduction to Markup Languages (HTML and DHTML), HTML Document Features and fundamentals, HTML Elements, Creating Links; Headers; Text styles; Text Structuring; Text color and Background; Formatting text; Page layouts, Images; Ordered and Unordered lists; Inserting Graphics; Table Creation and Layouts; Frame Creation and Layouts; Working with Forms and Menus; Working with Radio Buttons; Check Boxes; Text Boxes, HTML5	11	
III			
IV	The Nature of JavaScript: Evolution of Scripting Languages, JavaScript-Definition, Programming for Non-Programmers, Introduction to Client-Side Programming, Enhancing HTML Documents with JavaScript. Static and Dynamic web pages		
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  Create a web page using an ordered list and an unordered list.  Design a web page to show your institute with hyperlinks.  Create your resume on the HTML page.  Create a web page and divide the web page into four frames. In one frame create three links that will display different HTML forms in the remaining three frames respectively.  Create a web page to show the record of the college in the form of a table.  Write an HTML code to add internal CSS on a webpage  Design a blog-style personal website.  Design a web page to display your college with hyperlinks.  Write a JavaScript function to calculate the sum of two numbers.  Write a JavaScript program to find the maximum number in an array.  Write a JavaScript function to check if the given string is a palindrome (reads the same forwards and backward).  Write a CSS file and attach it to any 3 HTML web pages.	30	

colors.

- Using HTML, CSS create a styled checkbox with animation on state change
- Design a web page that is like a compose page of e-mail. It should have:
  - a) Text boxes for To, CC, and BCC respectively.
  - b) Text field for the message.
  - c) Send button.
  - d) Option for selecting a file for attachment
- After clicking the send button a new page should open with the display message "Message has been sent".

# **Suggested Evaluation Methods**

#### **Internal Assessment:** End-Term > Theory **Examination:** • Class Participation: 5 A three-hour • Seminar/presentation/assignment/quiz/class test etc.: 5 exam for both theory and • Mid-Term Exam: 10 practicum. > Practicum End Term • Class Participation: NA Exam Marks: • Seminar/Demonstration/Viva-voce/Lab records etc.: 10 70(50(T)+20(P)

# **Instructions for Paper-Setter**

The examiner will set a total of nine questions. Out of which the first question will be compulsory. Remaining eight questions will be set from four unit selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. First question

will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions in all, selecting one question from each unit. The first question will be compulsory.

Unit	Topics		
I	Introductory Concepts: Operating System, Functions and Characteristics, Historical Evolution of Operating Systems, Operating System Structure. Types of Operating System: Real-time, Multiprogramming, Multiprocessing, Batch processing.  Operating System Services, Operating System Interface, Service System Calls, and System Programs.  Process Management: Process Concepts, Operations on Processes, Process States, and Process Control Block. Inter-Process Communication.	11	
II	CPU Scheduling: Scheduling Criteria, Levels of Scheduling, Scheduling Algorithms, Multiple Processor Scheduling, Algorithm Evaluation.  Synchronization: Critical Section Problem, Semaphores, Classical Problem of Synchronization, Monitors.  Deadlocks: Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection and Recovery.	12	
III	Memory Management Strategies: Memory Management of Single-user and Multiuser Operating Systems, Partitioning, Swapping, Contiguous Memory Allocation, Paging and Segmentation; Virtual Memory Management: Demand Paging, Page Replacement Algorithms, Thrashing.	11	
IV	Implementing File System: File System Structure, File System Implantation, File Operations, Type of Files, Directory Implementation, Allocation Methods, and Free Space Management.  Disk Scheduling algorithm - SSTF, Scan, C- Scan, Look, C-Look. SSD Management.	11	
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  • Working with various operating systems, and performing different operations using operating systems.  • Write a program to print file details including owner access permissions, and file access time, where file name is given as argument.  • Write a program to copy files using system calls.	30	

- Write a program to implement the FCFS scheduling algorithm.
- Write a program to implement the Round Robin scheduling algorithm.
- Write a program to implement the SJF scheduling algorithm.
- Write a program to implement a non-preemptive priority-based scheduling algorithm
- Write a program to implement preemptive priority-based
- scheduling algorithm.
- Write a program to implement the SRJF scheduling algorithm.
- Write a program to calculate the sum of n numbers using the thread library.
- Write a program to implement first-fit, best-fit, and worst-fit allocation strategies.

The examiner will set a total of nine questions. Out of which the first question will be compulsory. The remaining eight questions will be set from four units selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus. The candidate will have to attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	<ul> <li>Data Structure Definition, Data Type vs. Data Structure,</li> <li>Classification of Data Structures, Data Structure Operations,</li> <li>Applications of Data Structures.</li> <li>Algorithm Specifications: Performance Analysis and Measurement</li> </ul>	11
	(Time and Space Analysis of Algorithms- Average, Best and Worst Case Analysis).	
	<b>Arrays</b> : Introduction, Linear Arrays, Representation of Linear Array in Memory, Two Dimensional and Multidimensional Arrays, Sparse Matrix and its Representation, Operations on Array: Algorithm for Traversal, Selection, Insertion, Deletion and its implementation.	
II	<b>String Handling</b> : Storage of Strings, Operations on Strings viz., Length, Concatenation, Substring, Insertion, Deletion, Replacement, Pattern Matching	11
	<b>Linked List</b> : Introduction, Array vs. linked list, Representation of linked lists in Memory, Traversing a Linked List, Insertion, Deletion, Searching into a Linked list, Type of Linked List.	
III	<b>Stack</b> : Array Representation of Stack, Linked List Representation of Stack, Algorithms for Push and Pop, Application of Stack: Polish Notation, Postfix Evaluation Algorithms, Infix to Postfix Conversion, Infix to Prefix Conversion, Recursion.	12
	Introduction to Queues: Simple Queue, Double Ended Queue, Circular Queue, Priority Queue, Representation of Queues as Linked List and Array, Applications of Queue. Algorithm on Insertion and Deletion in Simple Queue and Circular Queue. Priority Queues.	
IV	<b>Tree:</b> Definitions and Concepts, Representation of Binary Tree, Binary Tree Traversal (Inorder, postorder, preorder), Binary Search Trees – Definition, Operations viz., searching, insertions and deletion;	11
	Searching and Sorting Techniques, Sorting Techniques: Bubble sort, Merge sort, Selection sort, Quick sort, Insertion Sort. Searching Techniques: Sequential Searching, Binary Searching.	
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  • Write a program that uses functions to perform the following operations on an array i) Creation ii) Insertion iii) Deletion	30
	<ul> <li>iv) Traversal.</li> <li>Write a program that uses functions to perform the following operations on strings i) Creation ii) Insertion iii) Deletion iv) Traversal.</li> </ul>	
	<ul> <li>Write a program that uses functions to perform the following operations on a singly linked list i) Creation ii) Insertion iii) Deletion iv) Traversal.</li> </ul>	
	Write a program that uses functions to perform the following operations on a doubly linked list i) Creation ii) Insertion iii) Deletion iv) Traversal	
	Write a program that implement stack (its operations) using	

- i) Arrays ii) Linked list(Pointers).
- Write a program that implements Queue (its operations) using i) Arrays and ii) Linked lists (Pointers).
- Write a program that implements the following sorting i) Bubble sort ii) Selection sort iii) Quick sort.
- Write programs for various types of tree traversals.

# **Suggested Evaluation Methods**

## **Internal Assessment:**

#### > Theory

- Class Participation: 5
- Seminar/presentation/assignment/quiz/class test etc.: 5
- Mid-Term Exam: 10

#### > Practicum

- Class Participation: NA
- Seminar/Demonstration/Viva-voce/Lab records etc.: 10
- Mid-Term Exam: NA

# End-Term Examination: A

three-hour exam for both theory and practicum.

End Term Exam Marks: 70(50(T)+20(P)

# **Part C-Learning Resources**

- Seymour Lipschutz, Data Structures, Tata McGraw- Hill Publishing Company Limited, Schaum's Outlines.
- Yedidyan Langsam, Moshe J. Augenstein, and Aaron M. Tenenbaum, Data Structures Using C, Pearson Education.
- Trembley, J.P. And Sorenson P.G., An Introduction to Data Structures with Applications, McGraw-Hill.
- Mark Allen Weiss, Data Structures and Algorithm Analysis in C, Addison- Wesley.

<sup>\*</sup> Applicable for courses having practical components.

Scheme: 2024-25, Syllabus: 2024-25			
I	Part A - Introduction	on	
Subject	BCA (CTIS)		
Semester	IV		
Name of the Course	Basics of Informati	on Security	
Course Code	B23-CTS-402		
Course Type: (CC/MCC/MDC/CC- M/DSEC/VOC/DSE/PC/AEC/ VAC)	CC-B4		
Level of the course (As per Annexure-I	200-299		
Pre-requisite for the course (if any)	B23-CTS-202		
Course Learning Outcomes(CLO):	After completing this course, the learner will be able to:  1. understand the fundamental principles of information security.  2. learn about various types of security threats and vulnerabilities.  3. develop skills for implementing basic security measures.  4. understand the concepts of operating systems and web securities.  5*. Understand the practical aspects of security.

Unit	Topics	Contact Hours		
I	Introduction to Computer Networks: Overview of computer networks, types of networks (LAN, WAN, MAN), network topologies, and network models (OSI and TCP/IP). Physical Layer: Data transmission methods, signal encoding techniques, transmission media, and network devices (hubs, switches, routers).			
II	Data Link Layer: Error detection and correction, flow control, MAC protocols, Ethernet, and switching.  Network Layer: IP addressing and subnetting, routing algorithms, IPv4 vs. IPv6, and ARP.	11		
III	Transport Layer: Transport layer protocols (TCP, UDP), congestion control, and quality of service (QoS).  Application Layer: Application layer protocols (HTTP, FTP, DNS, SMTP), web services, and network applications.	11		
IV	Network Security: Fundamentals of network security, cryptography, firewalls, VPNs, and intrusion detection systems (IDS). Wireless Networks: Wireless communication principles, Wi-Fi, Bluetooth, mobile networks, and ad hoc networks.	12		
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  • Setting up a basic LAN  • Implementing error detection and correction algorithms.  • Analyzing signal encoding techniques  • Configuring routers and switches, subnetting exercises.  • Implementing and analyzing TCP and UDP protocols.  • Developing simple client-server applications.  • Setting up and configuring firewalls and VPNs.  • Setting up and securing a wireless network.	30
