

# Panipat Institute of Engineering and Technology

## Department of Civil Engineering

For Lecture's in **B. Tech. Civil Engineering V<sup>th</sup> Semester**

| Course No.                  | Title of the Course  | Course Structure |              |
|-----------------------------|--|------------------|--------------|
| <b>CE-301A</b>              | <b>STRUCTURAL ANALYSIS-II</b>  | <b>L-T-P</b>     | <b>2-1-0</b> |
| <b>COURSE OUTCOMES (CO)</b> |  |                  |              |
| CO1                         | Students will be able to study behavior in the form of S.F and B.M for continuous beams by influence line method |                  |              |
| CO2                         | Students will be able to analyze the behavior of rolling load on structures and fixed arches                     |                  |              |
| CO3                         | Students will be able to analyze the frames structures   |                  |              |
| CO4                         | Students will be able to study about methods for stiffness and flexibility.                                      |                  |              |
| UNIT NO`                    | Topics To Be Covered   | Lecture Nos      |              |
| 1                           | Introduction to influence line diagram   | 1                |              |
|                             | Influence lines for three hinged   | 2-3              |              |
|                             | Influence lines for two hinged arches  | 4-5              |              |
|                             | load position for Max. S.F. and B.M. at a section in the span  | 6-7              |              |
|                             | Influence Line for statically indeterminate Beams  | 8                |              |
|                             | Muller-Breslau Principle   | 9                |              |
|                             | I.L. for B.M. & S.F. for continuous Beams  | 10-11            |              |
| II                          | Introduction to rolling load   | 12               |              |
|                             | Single concentrated load   | 13               |              |
|                             | Uniformly distributed load longer than span  | 14-15            |              |
|                             | uniformly distributed load shorter than span   | 16-17            |              |
|                             | Two-point loads, several point loads   | 18               |              |
|                             | Max. B.M. and S.F. Absolute Max. B.M   | 19               |              |
|                             | Fixed Arches expression for Horizontal Thrust and Bending Moment at a section                                    | 20               |              |
|                             | Elastic Centre   | 21-22            |              |
| III                         | Kani's Method: Analysis of continuous beams  | 23-26            |              |
|                             | Analysis of Simple frames  | 27-29            |              |
|                             | Analysis of frames with different column lengths   | 30               |              |
|                             | Analysis of frames end conditions of   | 31-32            |              |

|    |  |    |
|----|--|----|
|    | the bottom story.  |    |
| IV | <b>Approximate Analysis of frames:</b> (i) For vertical loads,<br>(ii) for lateral loads | 33 |
|    | Portal method  | 34 |
|    | Cantilever method  | 35 |
|    | Matrix Methods Introduction  | 36 |
|    | Stiffness Coefficients, Flexibility Coefficients   | 37 |
|    | Development of flexibility & stiffness matrices for plane frame                          | 38 |
|    | Global axis and local axis,  | 39 |
|    | Analysis of plane frame  | 40 |
|    | Pin jointed and rigid jointed.   | 41 |
