LESSON PLAN

Subject: Principles of Programming

Subject code: MCA-20-24(I)

Sr.	Topic Covered	No. of	СО	Teaching
No		Lectures	Covered	Methodology
	Introduction to Programming Languages	1		
1				Board
	History, evolution, and impact of	1		
2	programming paradigms			РРТ
	Role of Programming Languages, Importance	1		
	and application areas of programming			
3	languages			Board
	Characteristics of Good Programming	1		
	Languages Features that make a language			Video
4	suitable for various tasks			
	Effects of Programming Environment	1	•	PPT
	Programming environments and how they		CO1	
5	affect language design			
	Translators and Virtual Architectures	2	•	
	Compilers, interpreters, and virtual machines			Video
6	overview			
	Binding and Binding Time Static vs.	1	•	Video
7	dynamic binding and their significance			
	Language Syntax Structure of programming	1		Board
	languages: Syntax and semantics			
8				
	Program Analysis and Object Program	2		
	Synthesis Program analysis and the process			тла
9	of generating object programs			FFI
	Formal Translation Models Introduction to	2		
	BNF Grammars and their role in syntax			Board
10	specification			
11	General Parsing Techniques	1		
				Board

	Parsing techniques and algorithms for language translation				Video
	Recursive Descent Parsing	2	2		
	Detailed discussion on recursive descent				Video
12	parsing technique				
	Revision & Doubt Session 1				
	Review of Unit I topics, doubt clearing, and				
13	discussion				
		2			
	Chomsky Hierarchy of Formal Languages				Board
	Overview of the Chomsky hierarchy and its				
14	importance				
	Regular Expressions and Finite State	2			Deerd
	Automata				Board
	Regular languages and finite state automata				
15	concepts				
	Context-Free Grammars and Pushdown	2			
	Automata				BOARD
	Deep dive into context-free grammars and				
16	pushdown automata				
	Ambiguous Grammars and Language	3		CO2	
	Semantics				
	Dealing with ambiguous grammars and				
17	introduction to language semantics				PPT
	Attribute Grammars and Denotational	1			Deend
	Semantics				Board
	Defining attributes in grammars and their				
18	use in semantics				
	Program Verification and Validation	2			
	Techniques for ensuring program				
19	correctness and reliability				PPT

	Data Types and Type Checking	2		
	Types, type declarations, and type checking			РРТ
20	mechanisms			
		2		
	Type Promotion and Type Casting			PPT
	Mechanisms of type promotion and type			
21	casting in programming languages			
		1		
	Composite Data Types and Enumerators			PPT
	Exploring complex data types and			
22	enumerators			
		1		
	Structured Data Types and Abstract Data			Board
	Types			
	Differences and significance of structured			
23	and abstract data types			
	Information Hiding and Subprograms	1		
	Concepts of encapsulation, modularity, and			
24	subprogram design			Board
	Good Program Design Practices	1		
	Best practices for designing effective		03	PPT
25	programs			
	Type Definitions, Type Equivalence, and	1		
	Compatibility			
	Detailed discussion on type definitions and			Video
26	compatibility			
	Inheritance and Derived Classes	1		
	Basic principles of inheritance and the role			PPI and
27	of derived classes			Video
	Polymorphism and Software Reuse	1		
	Implementing polymorphism and promoting			
28	software reuse			Video

	Sequence Control	1		דחח
29	Implicit and explicit sequence control within programming languages			PPI
	Subprogram Sequence Control	2		PPT
30	Sequence control between statements and subprograms			
	Revision & Doubt Session 3			
31	Review of Unit III topics, doubt clearing, and discussion			
-	Parameter Passing Techniques	1		
32	Call by value, reference, and other parameter passing mechanisms			PPT
	Static & Dynamic Scoping, Memory Management	1		Board
33	Static vs. dynamic scoping, heap storage management		CO4	Board
	Exceptions, Co-Routines, and Parallel Programming	1		Board
34	Exception handling, co-routines, and introduction to parallel programming			
	Processor Design, Network Programming, Applets, XML	1		Board
	Hardware/software architecture, applets,			
35	scripting languages, and XML
